

MASTERSCREEN

The MasterScreen is a low consistency screening device designed to mechanically separate fibers from contaminants, including Stickies, Dirt, Shives, vessel cell elements, plastics and hot melts. Contaminants are deposited automatically onto a filter paper for display and analysis.

System features

- Pressurized screening chamber adjustable to 15 psi
- Screens up to 100 grams (oven dried equivalent)
- Results between 10 15 minutes
- Laser cut screen plates available in two standard sizes (.004" and .006") and custom between .003" - .014"
- AutoFilter for quick deposit of contaminants
- AutoFilter can customized to accommodate various sized filter paper
- AutoFilter cartridge is easily repaired with "bolt in" screen
- Lid on feed tank localizes water spray
- Large feed tank to accept samples up to 100 grams, oven dried equivalent
- Feed tank air mix to ensure delivery of uniform consist ency
- XLQ valve between screening chamber and feed tank
- Multi program feature including MS A, XLQ, SA, and SCRN
- Adjustable feed tank level control

Benefits

The MasterScreen provides a rapid and repeatable method for the collection of both Shives and/or Stickies.

For Shives, it allows for the pinpointing of problems that occur in areas such as digesters, cleaners, refiners, grinders and screens. For Stickies, it allows for the pinpointing of problems that occur in repulpers, cleaners and screening. This data will support reducing the frequency of Dirt, Shives or Stickies in the final product, leading to increased profitability. Bottom-line: Increased profitability through troubleshooting, optimization and monitoring.

Service and hardware requirements

- 40 liters per minute of potable filtered water
- 3/4" NPT male fitting for water supply
- 1-1/2" NPT male fitting for drain
- 240 V, 50 Hz electrical service
- Compressed air at 60 l/m at 5 bar
- 3/8" slip fitting for air supply

Shipping specification - Crated weight & size

- Weight: 150kg
- Height: 84 cmWidth: 219 cm
- Depth: 89 cm
