

Software for Paper Laboratories

Product code **RL-SPL-A**

RYCOLAB

[illegible]

Device description

RYCOLAB software is a software for the control of all your laboratory measurements. It can control the values from one single unit up to 10 units. The software collects the data and always reports in the same form. You can start with one instrument and add more instruments at later stage.

RYCOLAB software can do many calculations based on your measurements. RYCOLAB software can store results in a powerful database using an intelligent classification and a quick search modulus. RYCOLAB software has statistical functionality and you can export results and print them.

RYCOLAB software allows you to connect different devices to one computer. It uses the RS232 port, Ethernet or USB. Test results of instruments without interface can be entered manually.

RYCOLAB software CLIENT SERVER allows you to build a network for your laboratory with quality control and production features
